

Pacnet Leased Line

Point to Point Security, High Quality Connection

Setting up branch offices helps you accelerate business growth, but it also poses operational challenges to your organization, particularly in terms of sharing business critical information between two or more sites. You need to guarantee reliable connection, efficient routing and the ability to seamlessly increase bandwidth as the need arises.

Leased Line access provides companies with higher levels of security, efficiency and availability. Hong Kong companies that require secure, guaranteed link between two sites need a dedicated access so they can support point to point voice communications and real time access to business or customer data without having to worry about downtimes. With Pacnet Leased Line service, you can support point to point sharing of bandwidth-critical enterprise applications including Voice-over IP, video conferencing, multimedia applications, e-commerce and VPN.

Pacnet Leased Line offers you unparalleled high quality communication by building symmetric private voice and data link between your headquarters and branch office. Spanning short or long distances, the service maintains a single open circuit at all times with speeds ranging from 64K to E1 depending on location and availability. With Pacnet Leased Line, you remain securely connected with your teams, your branches within Hong Kong, across Asia and beyond.

Pacnet Leased line offers you:

- Choice of bandwidth (from 128Kbps to E1) to meet your business needs
- Fully managed and guaranteed service with uninterrupted monitoring
- Free Multi Router Traffic Grapher (MRTG) for bandwidth management and future upgrade planning
- Free Mailbox
- Bundled CPE

Technical Features:

- Connect to your LAN/WAN and Internet to facilitate a reliable Internet connection
- Static IP addresses
- Dedicated Internet access
