

Pacnet Metro Ethernet

Reliable WAN Connectivity, Leased Line-Grade Access

For a rapidly expanding enterprise that runs various types of critical business applications within your Wide Area Network (WAN), you cannot afford to cut corners. You need sufficient and scalable bandwidth to support bandwidth-hungry applications including large data transmission, Voice over IP (VoIP), video conferencing, multimedia applications, e-Commerce or VPNs.

Pacnet Metro Ethernet helps you support all your business communications demands without investments in new equipment or IT intervention - only a switch or router with Standard Ethernet Ports. It provides you with end-to-end Leased Line-grade service to help you support various business applications which can be shared among your teams in Hong Kong or around the world.

Running on our state-of-the-art optical fiber network, Pacnet Metro Ethernet delivers cost effective all-purpose WAN link that is flexible, scalable and with Leased Line-grade efficiency.

Pacnet Metro Ethernet offers you:

- Secure, dedicated and uncontested link across your Wide Area Network (WAN)
- Stable, permanent connection for consistent access quality
- High speed access to meet your increasing bandwidth demand
- 99.9% reliability backed by a comprehensive Service Level Agreement (SLA)
- Business grade core network with redundancy
- Support for all kinds of applications such as file transmission, Voice over IP (VoIP), video conferencing, multimedia applications, e-commerce and Virtual Private Networks (VPN)

Technical Features:

- Special routing for better network performance
- Ethernet Port with Bandwidth choices from 1Mbps to 100Mbps
- Supports both real IP addresses and NAT simultaneously
- Permanent connection with guaranteed bandwidth and low latency
- Free Multi Router Traffic Grapher (MRTG) report to monitor the traffic load on network-links
- Low latency and dedicated capacity for bandwidth-dependent applications terminating into a Pacnet MPLS IP VPN
